PIN*Private*TM.biz

Private communication between
perfect strangers online.

PIN*Proof*TM.biz

Authenticate checks, handwritten,
hand-signed documents,
and drawings.

Today's Internet is searching for a settling solution suite to (1) data and identity theft, (2) full-range payment options (refund, anonymity, non-repudiation), (3) handling and authenticating hand-written documents, and hand-jotted drawings, (4) fair and honest gaming. This search creates an opportunity for a serious entrepreneur to establish a major Internet presence by providing a comprehensive set of solutions to all these needs.

AGS Encryptions Ltd, a computer security company, has been developing the technology and the cryptographic foundation for a suite of solutions to all the above. The suite is ready for a thorough examination of merit to be followed by an investment commitment.

We therefore now take to present this Suite to serious enterprising entities for consideration of the opportunity.
